

## SOLON Corporation and Onyx Renewables Complete Four Additional Solar Projects for City of Mesa, Expanding Directly Interconnected Municipal Solar to 3.7 MW

**Tucson, AZ — February 26, 2026** — SOLON Corporation (“SOLON”), a leading solar energy solutions provider, and Onyx Renewables (“Onyx”), a national provider of localized energy solutions, announced the completion of four additional solar photovoltaic (PV) projects for the City of Mesa, Arizona, in December 2025. These projects are directly interconnected with the City of Mesa Electric Utility and bring the total solar capacity delivered by SOLON and Onyx for the City to 3.7 megawatts (MW).

SOLON delivered full engineering, procurement, and construction (EPC) services for all projects while Onyx financed the systems and will serve as the long-term owner and operator, together delivering high-quality systems designed for long-term performance and operational reliability.

SOLON and Onyx previously partnered to complete four solar projects in 2022 totaling 806 kWdc for the City of Mesa. The four newly completed projects add 2.9 MW, significantly expanding the Utility’s portfolio of locally generated renewable energy, and provide more than 600 shaded parking spaces.

These distributed energy projects directly enable the City of Mesa Electric Utility to enhance grid reliability, improve operational efficiency, and maximize the financial value of locally produced clean energy. This approach supports long-term energy cost stability while reinforcing the City’s commitment to sustainability and responsible infrastructure investment.

*“Direct interconnection to the City of Mesa Electric Utility allows these solar projects to deliver immediate and long-term value to the community,”* said Brian Seibel, President, SOLON Corporation. *“With a combined 3.7 MW now in operation, the City of Mesa is strengthening its energy resilience, reducing emissions, and keeping energy dollars local.”*

Direct utility interconnection provides several key benefits, including:

- Stable energy costs and long-term price predictability through onsite renewable generation
- Improved grid resilience through distributed local power
- Lower greenhouse gas emissions, supporting the City’s sustainability goals
- Greater control over local energy resources

*“Onyx is proud to partner with SOLON to provide more affordable, predictable energy to the City of Mesa through the development of these localized energy solutions,”* said Patty Rollin, Chief Commercial Officer at Onyx Renewables. *“These systems were customized to meet the City of Mesa’s unique goals and will help them reduce energy expenses while strengthening the reliability and resilience of their local grid.”*

(continued on page 2)

Over the next 25 years, the four new combined systems will produce 126.8 million kWh of clean, renewable electricity, delivering substantial environmental benefits\* equivalent to:

- Removing 17,472 gas passenger vehicles from the road for one year
- 16,557 homes avoiding electricity use for one year
- Planting and growing 1.2 million tree seedlings for 10 years

The successful completion of these projects reflects the ongoing partnership between SOLON, Onyx, and the City of Mesa and demonstrates how municipal utilities can leverage distributed energy resources to hedge against price volatility while meeting both economic and environmental objectives.

### **About SOLON Corporation**

Headquartered in Arizona, SOLON Corporation is a full-service commercial and utility-scale solar contractor delivering complete, cost-effective turnkey solar photovoltaic power projects and battery energy storage solutions. SOLON delivers streamlined project development, design, construction, financing, and operational services to customers throughout the Southwest and is committed to advancing solar energy through innovative and efficient technologies. Learn more at [www.solonamerica.com](http://www.solonamerica.com) or visit our [LinkedIn](#).

### **About Onyx Renewables**

Onyx Renewables is a leading provider of predictable, affordable clean energy solutions nationwide. With more than 400 projects completed and over a decade of experience, Onyx partners with commercial, industrial, real estate, and public sector clients to deliver onsite clean energy solutions that enable cost predictability, cost savings, and energy reliability. From customized design and financing to construction and long-term operations, Onyx is building the bridge from today's clean energy reality to tomorrow's possibilities with best-in-class quality solutions that empower businesses and communities.
